Re: Reply Comments - ET Docket No. 06-135 & RM-11271

Dear Chairman Martin:

I feel it is both my obligation and duty to disclose information regarding the Alfred Mann Foundation and its request that the Commission adopt service rules and allocate up to 20 MHz of spectrum to accommodate new wireless wideband implantable microstimulator devices. The device technology and "Suspended Carrier" telemetry protocol that the Mann Foundation proposes to use were not developed exclusively for medical applications and I believe if the FCC is going to ask for public comment regarding the proposed regulations, then it is imperative that the information be made available to the public.

The Alfred Mann foundation is making this request to the Commission on behalf of the NSA and the US Department of Defense and is classified as a Special Access Program (known as a "SAP" or "black project". The Mann Foundation developed this technology under a "waived" SAP that held carved out status which is even blacker than "unacknowledged" SAP's. The contract used funding from the NIH so as to avoid tracability and the "waived" classification means that the Deputy Secretary of Defense was only required to notify 8 members of congress instead of all of them. The documents I have obtained through FOIA provisions detail the contract research efforts by Dr. Loeb of the Mann Foundation which include behavior modification, delivery of testosterone via the implanted devices with marked increases in rage and promiscuity in research subjects, sleep deprivation, auditory applications focusing on back telemetry and intelligence acquisition and other Defense and Intelligence related applications for the device technology developed here.

In 2002, Mann Foundation personnel were by Detectives from the Los Angeles Police Department and FBI regarding illegal use of human research subjects, and specifically the use of multiple 224.840MHz repeaters that were licensed in the names of family members and retired ham enthusiasts who were unaware that Mann President Joseph Schulman used their call sign to establish some of the auxiliary repeaters. At that time, Schulman, in fear of disclosing classified information considered to be pertinent to National Security, lied to law enforcement personnel by stating that the 224.840MHz use of the spectrum was a "hobby" and unrelated to Mann Foundation research activities. When I initiated complaints to the FCC in 2002 regarding this, Defense Personnel phoned my home and threatened me and then later, remotely accessed my computer and maliciously destroyed evidence and data using technology similar to the "SYSSEC" and "GETPASS" remote administration method developed by defense personnel in Georgia.

Lastly, I have had the opportunity to look at all of the filed comments on this matter, and can verify through the CRISP database and published materials that more than 80% of the respondents filing comments are individuals that have worked under contract receiving funding from William Heetderks of the NIH, the Defense Advanced Research Projects Agency, employees at JPL/NASA, Hughes, or individuals I know to be directly affiliated with Alfred E. Mann and its principals who engaged in a cookie cutter "form letter" campaign and echo the same self-serving interest of a special interest. You must weigh the public right to know, and consider what the Defense department applications for this technology will be as well as the prior criminal misconduct that occurred by personnel at the Mann Foundation.

Because the Mann Foundation has already abused this technology by performing research using human research subjects without the necessary IRB approval and have focused on weapon, intelligence, and behavior modification applications under a Defense contract that was carved from the budget by using NIH funding, I am requesting that the Commission deny the Mann Foundation request. This technology has serious implications in our society and already it has been abused and hidden from the public. I am urging the commission to consider

their responsibility to the public and not grant AMF's request for commencement of a separate rulemaking.

Sincerely,

/s/ David A. Larson
